Production Methods

Processing Machinery

Conveyor Systems

PLC Programming

## PROFILE

*Task driven and methodical Factory Worker with eight years' hands-on experience in parts assembly of auto mechanical equipment. Has a proven track record of attaining a 100% product feed score for the last 28 weeks. Competent at adhering to OSHA workplace safety regulations and attained a Certified Mechanical Technician as well as Certified Welder qualifications in the last six months.*

## EMPLOYMENT HISTORY

### Food Factory Worker, ABC Sweets and Confectionary

Denver

Jan 2019 — Present

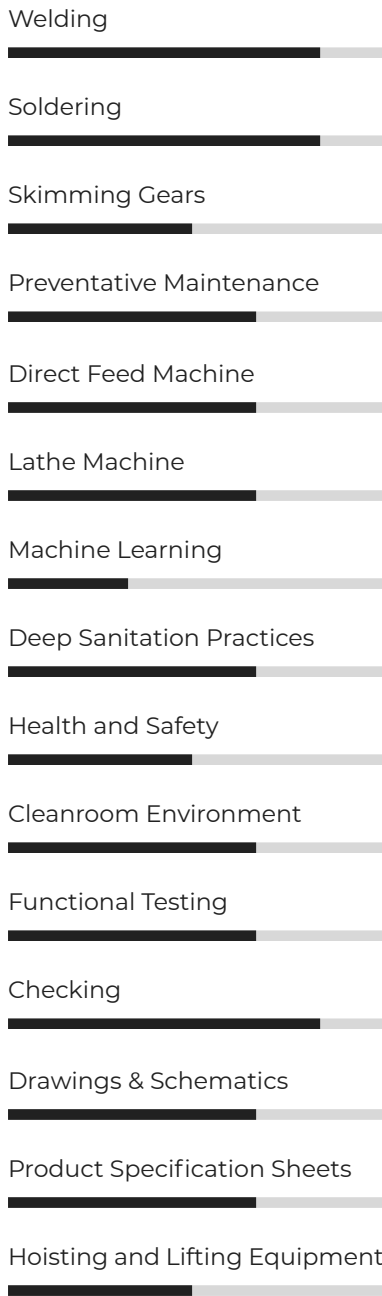

*Enhanced the finished product's quality by conducting vigilant manual scanning at three stages of the production process instead of just the final stage resulting in defective ratio's dropping by 34%.*

- Signal co-workers to guide them regarding the placement of pallets containing baking products such as flour, sugar, oil, and powdered eggs to be used during production and processing.
- Prepare raw materials for mixing and processing
- Conduct minor repairs to equipment and machinery such as replacing worn components or fixing damaged mechanical parts
- Position spouts and chutes of raw material storage bins so that food ingredient containers can be filled for automated mixing and processing to take place
- Clean and sanitize work areas, equipment, and machinery after each shift
- Deconstruct defective food products for reprocessing
- Ensure a constant supply of ingredients to be fed through to the mixing and processing machinery via the conveyor systems
- Operate machinery such as slicers and cutters when the machinist is on a break

### Textile Factory Worker, Borning Textiles and Garments

Cambell

Sep 2016 — Dec 2018

## HOBBIES

Skiing, Running, Hiking

## LANGUAGES

*Decreased machine shutdown cycles by 40% by increasing preventative maintenance schedules from once a month to one a week during factory downtimes.*

- Operate looming, knitting, braiding and looming machinery on a rotational schedule
- Carry material pallets containing fabric and threads to the designated work stations
- Fetch tools such as needle threaders, scissors and die mixing components from the storeroom
- Program and calibrate industrial sewing and weaving machinery
- Conduct preventative maintenance activities to ensure machinery remains in proper working order
- Feed cloth and fabric into die buckets
- Adjust color components in the die mixers according to process specification orders
- Feed fabric into sewing machines and sew garments according to predetermined production specification
- Conduct finishing duties such as cutting off loss threads, operating iron presses and affix buttons and hooks
- Select and tag finished garments and load them onto conveyor belts

## EDUCATION

### ISA Certified Automation Professional (CAP), The International Society of Automation

Triangle Park

Jul 2018 — Jul 2019

### Certified Production Technician (CPT), Manufacturing Skill Standards Council

Alexandria

Jan 2017 — May 2017

### National Career Readiness Certificate, American Testing College (ACT),

Iowa City

Oct 2016 — Nov 2016

### GED Diploma, West Side High School

Charlotte

Dec 2013 — Dec 2015

# INTERNSHIPS

---

## **In-Service Apprenticeship, Aromax Chemicals**

Louisville

Oct 2015 — Dec 2015

*Part of the line achieving a hundred percent of quality standards with no products being flagged for defects by the quality control department and still exceeding production targets by 130%.*

- Monitor pumps, valves and gauges to regulate the flow of liquids and air
- Mark and tag identification on parts of the boilers and steamers to indicate the ones requiring maintenance or replacement
- Dump materials such as organic chemicals and raw materials into machine hoppers before mixing and processing takes place
- Mix raw materials according to specified procedures or formulas before extrusion and extraction are to begin
- Record information of products tested, meter readings on machinery and dates and times of processing activities
- Review charts and gauge readings and compare with standard safety numerical values to determine that they are operating in the designated safety ranges according to OSHA
- Measure and grade products coming out of the feeding batches in comparison to standard specifications and quality standards
